

Clinical Research Internships

BioActor is a life-science company, located in Maastricht, the Netherlands, that develops healthy and innovative ingredients in the food supplement industry. The company continuously performs human clinical trials in collaboration with the University of Maastricht to investigate health effects of different ingredients. As an intern, you will be closely involved in one or more clinical trials and data analysis.

Flavonoids are polyphenolic compounds with diverse beneficial effects, such as anti-inflammatory, antioxidant, and anti-microbial activities. Two clinical studies are currently being carried out to investigate the effects of flavonoids on gastrointestinal health and cognitive health.

Duration: Preferably 6 months (4 months at minimum) from 01-09-2020 (earlier/later is also possible)

Requirements

- MSc student in health and/or nutrition
- Proficient verbal and written skills in English
- Knowledge of SPSS would be an asset
- (Basic) knowledge of the Dutch language is preferred

Supervision: Interns will assist in human clinical research projects. They will be supervised by a clinical researcher from BioActor and a researcher from the University of Maastricht

Internship Activities:

- Recruitment & screening of subjects for studies
- Support during study days
- Support during lab analyses
- Data base entries in electronic case report file (CRF) in Castor
- Data analysis
